The PV212 is our new dump-from-seat grass catcher for Wright stand up mowers. This system is compact with good visibility and holds 9.5 bushel. The rugged, all-steel Blower is vertical and adds only twelve inches to the width of the deck.

The PV230 is a good vacuum collection system for Wright operators wanting individual containers. It comes with two 30-gallon Rubbermaid® cans for a capacity of 7 bushels. The narrow profile and angled top allows good visibility and clearance.

Removing the blower consists of a spring tensioned belt and 2 pins that mount to existing holes in the deck.

The quick attach catcher can simply be removed in seconds by removing 2 pins and sliding the catcher backwards.
